

FON CELEBRATES ITS FIRST ANNIVERSARY WITH OVER 100,000 WIFI ACCESS POINTS

The FON Community now has 250,000 registered users with a presence in more than 140 countries

MADRID, Spain—February 6, 2007—Today **FON** is celebrating its very first anniversary. Launched officially one year ago, **FON** has revolutionized the WiFi industry with its Community of members who share WiFi.

In its first year, the **FON Community** grew to more than 250,000 registered Foneros in more than 140 countries, making it the largest WiFi community in the world. Now there are over 100,000 FON access points, called FONspots, around the world where Foneros can get free WiFi. **FON's** growth is further accelerating with over 1,000 FONspots added every single day across the globe.

These figures are no coincidence. First, **FON** received the support of Internet giants Google, Skype, Sequoia Capital and Index Ventures through a \$21.7 million investment at the beginning of 2006. Then throughout the year, **FON** reached important agreements with some of the major players in the industry.

FON entered into partnerships with major ISPs such as Neuf Cegetel, Labs2, Elitel or Interoute in Europe, and Excite and Seednet in Asia. Among gadget manufacturers, **FON** teamed up with Skype and Zing to provide WiFi access to FONspots on Skype Phones and Sansa WiFi enabled gadgets. Recently, **FON** has also launched campaigns with Skype, Paypal, Onet.pl, and Bebo to promote **FON** amongst their users.

FON has also started 2007 with more good news. In the US, **FON** recently distributed 8,000 La Foneras in two days, thanks to a promotion with GIGAOM. In Europe, **FON** is launching an initiative with Clearchannel and iBand to deliver WiFi coverage throughout Oslo, Norway

In its second year, **FON** will concentrate on growing and offering more services and products to its Community members. One of the ways **FON** will improve its Community services is by launching its new router, the La Fonera 2.0, based on Web 2.0 services. The La Fonera 2.0 frees a user's computer from the slow process of uploading and downloading and also acts as an interface to improve the user's Web 2.0 experience. The La Fonera 2.0, like the original La Fonera, continues to offer Foneros safe and secure WiFi on the road.

FON has planned to continue increasing its market penetration by signing agreements with retailers and e-tailers and reaching new partnerships with major ISPs.

Looking forward to a successful second year and celebrating the first anniversary of launching **FON**, the entire **FON** team, its friends, partners, and the Media, will gather together today in Madrid for a real Spanish fiesta.

About FON

FON is building the world's largest Wi-Fi community. Founded in 2006 in Madrid, Spain, **FON's** mission is to stimulate growth of WiFi Internet access through its WiFi sharing Community of "Foneros". **FON's** La Fonera WiFi routers have been specifically designed to enable Foneros to share their home access points with the **FON Community**. In return for sharing, Foneros gain free WiFi access everywhere in the world they find another Fonero. **FON's** investors include Google, Skype, Index Ventures and Sequoia Capital.
